T60
Air fuse , in-line excess flow shut-off valves G1/4 ... G1 1/2

Assists in complying with safety regulations

Tamper proof

Compact and safe design

Low pressure drop

Automatically resets after failure correction

High corrosion resistance

High air pressure rating

Technical features

Medium:
Compressed air, filtered, lubricated and non-lubricated, inert gases
Operation:
Fixed uni-directional excess flow automatic shut off valve.
Operating pressure:
16 bar max.
Minimum according to hose length. Drop pressure at shut-off flow . 0,14 or 0,3 bar.

Port size:
G1/4, G3/8, G1/2, G3/4, G1, G1 1/2
Mounting:
In-line two ways valve
To be inserted between fixed air supply and flexible hose air line
See guidelines for typical installation

Fluid/Ambient temperature:
-20 ... +80°C max.
Air supply must be dry enough to avoid ice formation at temperatures below +2°C

Materials
Body: Aluminium
Internal parts: Brass
Spring: Stainless steel

Technical data, standard models

Function	Port size	Drop pressure at shut off flow (bar)	Shut off flow rate at 7 bar (dm^3/s) ±10%	Flow at 7 bar Δ p 0,07 bar (dm^3/s)	Weight (kg)	Model

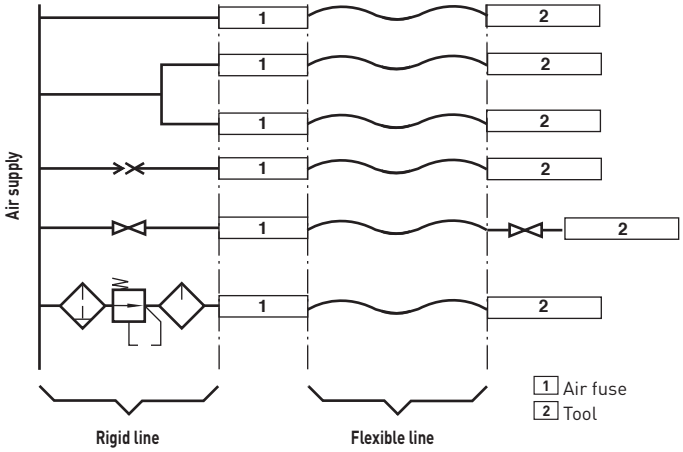
Measurements
Flow and pressure tests conducted according to ISO-6358 test circuit.
Mean measured flow values are provided at standard reference condition (20°C, 1,01 bar).
Indicated pressure values are relative pressure in bar.

Hose lengths
Graphs are for indicated hose internal diameter in key.
Consult our Technical Service for hose lengths and internal diameters different from the recommended one.

Guidelines for typical installation

The Air Fuse should be installed directly between fixed or rigid pipework and the flexible tube to protect the whole length of the flexible tube. Only tubing after the Air Fuse is protected. The Air Fuse must be installed in the correct direction for Airflow. Failure to do this will render the Air Fuse ineffective. When a shut off valve is located before the Air Fuse, the valve must be opened slowly in order to control initial air flow and avoid decompression effects which may trip the Air Fuse.



How to select an air fuse

a) The Port size of the Air Fuse should be nominally equal to that of the supply lines - eg a 1/2" (12.7mm) Air Fuse should be used with a 1/2" (12.7mm) ID hose.
b) Always select the high flow model (91) if there is sufficient system pressure for the length of hose to be protected.
See tables hose length vs minimum supply pressure.
c) If there is insufficient system pressure, or long hose lengths are to be protected, use model 90.
d) After installation always test each valve for proper function.
See section how to check an Air Fuse below.
e) The pneumatic system must be capable of delivering the flow required to activate the Air Fuse.
f) For use with spring coils consult table. See table flow vs pressure supply.

How to check an air fuse

* Install Air Fuse following the instructions supplied
* Connect tool or complete circuit to the air line
* Switch on operation to ensure a complete cycle is performed
* If tool or complete circuit starts and runs satisfactorily, stop operation and drain air line. Disconnect hose from tool or circuit and secure hose end. Turn on air supply progressively (to avoid decompression effect). Prior to fully reaching operation conditions, the valve should suddenly activate and cut off the flow. A slight air flow will remain as part of the automatic re-set function. If the Air fuse is not activated the unit should be disconnected and the lower flow range Air Fuse should be used.

Warning

These products are intended for use in industrial compressed air systems only. Do not use these products where values can exceed those listed under **»Technical features/data«**.

Before using these products with fluids other than those specified, for non-industrial applications, life-support systems, or other applications not within published specifications, consult NORGREN.

Through misuse, age, or malfunction, components used in fluid power systems can fail in various modes.

The system designer is warned to consider the failure modes of all component parts used in fluid power systems and to provide adequate safeguards to prevent personal injury or damage to equipment in the event of such failure.
System designers must provide a warning to end users in the system instructional manual if protection against a failure mode cannot be adequately provided.
System designers and end users are cautioned to review specific warnings found in instruction sheets packed and shipped with these products.
